# Version for Distributors

The NFR versions incorporate the entire product portfolio of Ferrari electronic AG, allowing you to satisfy your costumers' needs by offering powerful solutions.

---

## Product Description

Our version for distributors ("Not For Resale", NFR) essentially forms the basis of a trustworthy partnership program by becoming acquainted with our product.

We constantly strive to find new distributors that are familiar with the OfficeMaster portfolio and enhance their customer's infrastructure with the abundance of our solutions.

For this reason, we have introduced fair product packets for distributors only.

---

## How do I Apply and What is the Prerequisite to be Qualified for NFR?

First and foremost, you need to be a reseller with qualified competences in Unified Communications or telecommunication.

Secondly, we expect you to pass a fundamental course on our basic products. For more details on this matter, please contact our Ferrari electronic staff.

---

## Our NFR Versions

Use our NFR versions in demo- or test environments and convince yourself of their versatility. You may choose from the following:

### **NFR OfficeMaster Suite (NFR.48025)**

When ordered, you will receive the OfficeMaster Suite for 25 users including the Second Service.

Implement the OfficeMaster Suite as Unified Messaging solution which processes the services Fax, SMS and Voicemail. Hence, by using two concurrent lines, up to 25 users can utilize the OfficeMaster Suite in its full extent. An additional OfficeMaster connector (such as the Connector for Office 365) is included.

Furthermore, you are given the opportunity to test the new feature *Next Generation Document Exchange* (NGDX), which becomes available with the OfficeMaster release version 6.2.2.

### **NFR Business Appliance (NFR.30011)**

Our latest hardware, the Business Appliance, is also available as NFR version. It consists of the same functionalities as the regular version. Integrate the Business Appliance into your network and benefit from a single-user fax and voicemail solution that also includes a CallRecording and a telephony line.

### **SIP CallRecording (NFR.56410)**

If you, however, prefer to test CallRecording as a single service, you may do so by ordering the SIP basic license in its NFR version. Again, it comes with the same functionalities as the retail version. OfficeMaster CallRecording is the key solution for recording calls and managing them thereafter. Choose this NFR version to become acquainted with the CallRecording portfolio and essentially present it to your customers or even use it internally.

### **OfficeMaster Gate UC (NFR.22119)**

The NFC version of the OfficeMaster Gate consists of the actual OfficeMaster Gate including four licenses for its PRI interfaces. By using the integrated DirectoryService, you are given the option to implement Drop & Insert scenarios with two inbound and two outbound E1 connections.

---

## Support

Our Ferrari electronic support also covers NFR products. You may choose between both support versions (basic support product or support contract). To calculate support fees, only full versions are taken into consideration. Licenses with a limited period of time are not considered.
