

Release Notes Call Recording Version 6

[As of Oktober 02, 2026]

Release 6.0.0-1 October 2nd, 2026

General

New Features

- new USB driver for Windows 10/11 and Windows Server 2022/2025
- switched from 32-bit to 64-bit executables
- use .Net Framework 4.8
- added optional Speech-To_text (requires OfficeMaster Speech-AI Server)
- introduced a Software License, which allows to run the Call Recording Software on up to five machines

Bug Fixes

- fixed behavior of "save password" and "auto-login" checkboxes in login dialogs

Installer

New Features

- create a backup of registry settings before updating the software

Configuration Tool

New Features

- added Speech-To-Text configuration page
- added an option to replace a SIP device, when adding a new SIP license for the same capture interface as that one of an existing SIP device
- show all found hardware IDs in info panel
- added an optional online license check

Bug Fixes

- fixed LDAP configuration
- fixed endless auto-resize loop of configuration tool window on some machines
- fixed sporadic failures establishing a secure connection between collector service or TAPI connector and recording service

Call Browser

New Features

- added Speech-To-Text panel

Live Monitor

Bug Fixes

- fixed crash, when starting client side recording for a call with an anonymous sender

recS

Bug Fixes

- ignore multiplexed STUN messages before parsing SIP
- correctly stop SIP devices even if there were no received packets on the interface
