

Release Notes OfficeMaster Suite Version 8.1.3

[As of September 22, 2026]

The new minor release update of the OfficeMaster Suite includes fixes, stability improvements, and changes based on customer feedback. Specifically, the following changes have been made:

Third-party security fixes

- Implementation of a new Go compiler
- Update of the library references for the internal web server
- The Content Security Policy (CSP) does not define one of the directives for which there is no fallback option. The absence/exclusion of this directive is equivalent to allowing everything.
- Implementation of additional CSP headers. CSP provides a set of standard HTTP headers that website operators can use to declare permitted content sources that browsers are allowed to load on the respective page. The covered content types include JavaScript, CSS, HTML frames, fonts, images, and embeddable objects such as Java applets, ActiveX elements, and audio and video files.
- The web server responses did not provide protection against clickjacking attacks. This was corrected by the "frame-ancestors" directive or X-Frame-Options.
- Deployment of a new SSL library to close security gaps.

Microsoft 365® / Exchange Online Connector (msxbcsgate)

New Features

- Installation Wizard: mso365entra.exe is required for installation in the cfgprg directory (#6959)

Bug Fixes

- Update Exchange installation in the OfficeMaster 8 manual (#6792)
- Fixed Hybrid Connector crash (#6729)
- Emails sent to MSX are reported as successful even though MSX is not available (#6631)
- Clarified necessary API calls (to clientservices.googleapis.com) from OMS (#6469)
- MSX Connector does not send searchable PDFs when sending emails via LPD (#6454)
- SMS sending fails if the word "Subject" is in the subject line (#6447)
- OfficeMaster MMC unintentionally converts SMTP addresses to secondary addresses Addresses around (#6412)

Exchange 2013-2019/SE On-Premise Connector (msx2kgate)

Fixed Bugs

- An empty HTML body is not recognized as "empty" and results in an additional empty attachment (#6855)
- MSX Connector repeatedly attempts to deliver emails (fax messages) that were previously rejected with a NDR (#6640)
- Voice calls are terminated when the voice menu is accessed using the star key (#6499)
- PS Mail merge causes errors if two target formats are requested. (#6421)

DirectSIP Component (directsip)

Fixed Bugs

- fsip crashes when retrieving faxes (#6893)
- There are anomalies with OPTIONS sent over TLS (#6834)
- Erroneous Connection Lost on the OMS side (#6819)
- Make filegw responses identifiable for external parties (#6450)
- Firewall rule for Fimedia.exe is created incorrectly (#6413)
- Missing codec in SDP Answer leads to fipMedia problems (#6409)

Voicemail Server (voice)

Fixed Bugs

- Calls are terminated when attempting to access the voice menu using the star key (#6499)

Mail Gateway (mailgw)

New Features

- Directories (LDAP, CSV) are now addressed sequentially (#6429)

Fixed Bugs

- SMS sending in Subject+Body text mode has defective umlauts (#6510)
- Faulty incoming faxes are not processed correctly (#6459)

File Gateway (filegw)

Fixed Bugs

- FSIP crashes when retrieving faxes (#6893)
- File Gateway does not process send orders correctly (#6730)
- Make responses identifiable for external users (#6450)

SMS sending via UCP (ucptx)

Fixed Bugs

- Crash fixed (#6458)

SMS sending/receiving via GSM modem (gsmsms)

Fixed Bugs

- UCPTX writes dump file (#6458)
- SMS sending Fails if the subject contains the word "Subject" (#6447)

Syslog Component (syslog)

Fixed Bugs

- DirectSIP - Anomalies occur with OPTIONS sent over TLS (#6834)

Sending/Receiving SMS via SMPP Provider SMS (smpp)

Fixed Bugs

- Sending SMS fails if the subject contains the word "Subject" (#6447)

Command Converter (cmdconv)

Fixed Bugs

- Make TIF conversion more customizable regarding scaling and resolution (#6960)
- File gateway does not process send jobs correctly (#6730)
- Incoming faxes with errors are not processed correctly (#6459)
- Sending SMS fails if the subject contains the word "Subject" (#6447)

Base Converter (baseconv)

Fixed Bugs

- Incoming faxes with errors are not processed correctly (#6459)

OLE Converter (oleconv)

Fixed Bugs

- Converter crashes during Excel processing (#6399)

Store Server (storesrv)

Fixed Bugs

- Store0 Server does not reconnect to the configured network share after restarting (#6484)

Configuration Utility (cfgprg)

New Features

- MSXBCSGATE Installation Wizard: mso365entra.exe is added as a tool for installation in the cfgprg directory (#6959)
- OpenSSL for program communication has been updated

General

New Features

- Short delay for fragmented faxing is now configurable. (#6397)

Fixed Bugs

- Problem with re-sending faxes after transmission errors (#6411)
- Self-signed certificates can no longer be created in NGDX (#6402)
