

Release Notes OfficeMaster Suite Version 9.0.0.0

[As of April 01, 2026]

The following key features have been added to the new major release of the OfficeMaster Suite:

- Production support for Windows Server 2025, Exchange Server SE, Microsoft Office 2024 LTSC, and HCL Domino Server 14
- Complete overhaul of the voicemail server and integration of OfficeMaster Speech AI
- Rich Communication Services (RCS) are provided as a new delivery method
- Configuration migration to the OfficeMaster Admin Center as a native Windows and browser app
- Implementation of a local mailbox solution with a web client (Preview)

Rich Communication Services are the successor to SMS on mobile networks. In the OfficeMaster Suite, this is initially used to deliver PDF documents to mobile phones. Receiving is also implemented. This allows, for example, a quote to be sent to a customer's smartphone—and, using the WebAPI component, also from a CRM system. Changes to individual components:

Microsoft 365® / Exchange Online Connector (msxbcsgate)

New Features

- Expanded options for customizing the subject line of a fax (Exchange) (#6392)
- Date and time now included in the filename of received faxes via the Exchange Connector (#6345)

Fixed Bugs

- Native O365 Connector fails to find the user when the customer has more than 100 objects (#6820)
- Empty "From" field for incoming faxes with Exchange (#6576)
- Separate installation of the OfficeMaster Exchange Management Console does not install the prerequisites (#6333)
- Added check to see if the prerequisites required for the Exchange Online Connector are already installed (#6247)
- OfficeMaster Graph connection is currently unavailable for several customers. Not stable (API error from Graph/Cloud stability) (#6129)

Exchange SE On-Premise Connector (msx2kgate)

New Features

- Exchange connector does not write the attribute used to store user settings in the debug log (#6553)
- Display of the primary Vox address and primary SMS address in OfficeMaster Exchange Management (#5957)
- Exchange SE (2025) support (#4418)

Fixed Bugs

- Empty From field for incoming faxes with Exchange (#6576)
- Transfer domains cannot be configured for FAX, SMS, or Voice (#6383)
- Umlauts in SMS responses are not displayed correctly when using the Exchange Connector (#6328)

DirectSIP Component (directsip)

New Features

- Extension of the OMS MIB to include connection loss to Monitoring the SIP trunk via SNMP (#6529)
- Using a dynamic source port instead of the statically configured local destination port for sending SIP messages (#6523)
- Fax status with an expired certificate is 15/410 (No pages to transmit) - add a new, improved status code (#6431)
- Perform an NGDX cloud connectivity test immediately before sending/receiving faxes (#6313)
- Debug audio dump in fipMedia (#6114)

Fixed Bugs

- 35 seconds is a bit short for outgoing calls. 120 seconds should be sufficient. (#6560)
- Firewall doesn't detect that fSIP is no longer using a connection (#6530)
- SIP error 403 causes a new INVITE (#6322)
- Doesn't create a header line for the PAI field if the regular expression used for manipulation doesn't match (#6320)
- Interaction problems in SIP: Enabling options and the Save button (#6318)
- What technical requirements must the fipmedia server meet under Windows (#6221)
- fipMedia conversion to VCPKG and new libraries (#6207)
- Replace .NET 6 (support ends Nov. 2024) with .NET 8 (#6149)
- "Temporarily unavailable" error during call looping with the same call ID (#6113)
- Creates jobs with the undocumented parameters JobId and MsgType (#6045)
- SIP component logs in Transfer log shows the page count instead of the number of documents sent during document transfer (#6025)
- Uses iswihelpX.dll during installation even though it is not yet installed on the system. (#5580)
- SIP should be configurable to IPv4 only (#5418)
- Credit counter in fSIP is incorrectly implemented (#5079)

Voicemail Server (voice)

New Features

- Added "Play Voice Message" where missing. (#6675)
- Extension of fspchproc.exe to include PCM uncompressed and WAV file conversion (#6506)
- Automatically create/save a website profile for voicemail on first login (#6087)
- Offline speech recognition for voicemails (#5415)

SAP Connector (sap)

New Features

- GUI for SNC parameters of sapconnw (#6132)
- SNC encryption (#6076)

Fixed Bugs

- DrainMode was triggered by an alert, after which the system toggled between drained and operational for several minutes. (#6136)

Rich Communication Services (rcs)

New Features

- Documentation of RCS access provisioning via the LinkMobility registration process (#6451)
- LinkMobility connection to RCS (#6208)

Fixed Bugs

- Error texts only in English and no resend (split) (#6548)

Speech-to-Text (stt)

New Features

- GUI for sttconv (#6401)
- Offline speech recognition for voicemails (#5415)

Fixed Bugs

- Conv conversion error with incorrect server IP (#6626)

IamMail (iammail)

New Features

- Global configuration of the database (MariaDB) (#6595)

OfficeMaster Admin Center

New Features

- Enhanced "Transmission Status" For the sending method in DirectSIP, the "Total Pages" variable in the Admin Center needs to be configured (#6396)
- A new user role or adjustment of the support role in the OfficeMaster Suite is required for "read-only" permissions (#6352)
- Unified and consistent certificate management (#6015)
- Extension of the CfgProxy backend for setting up the Exchange connector (#5385)
- Sorting by component name (#5373)
- Authentication to M365 for setting up the Exchange Online connector (#5189)

Mail Gateway (mailgw)

New Features

- Directories (LDAP, CSV) are accessed sequentially (#6671)
- Notification about the LDAPS connection in MailGW (#6395)
- Integrating parameters into the OfficeMaster Suite GUI (#6394)
- Ability to customize the subject line for faxes in MailGW (#6391)

Fixed Bugs

- When faxes from Outlook are sent via Mailgw in "plain text" format, line breaks are removed (#6439)
- OfficeMaster configuration is no longer accessible (LDAPS certificate problem in Mailgw) (#6425)
- Check configuration parameters, reconsider default values, and make them configurable (#6092)

File Gateway (filegw)

New Features

- Templates for confirming fax transmission (Filegw) (#6252)

Fixed Bugs

- Laserfax mode creates empty files, and the associated jobs get stuck (#6781)
- ".fax" files submitted via Filegw are no longer converted in OMS 8.1.2 (#6668)
- In Applicom mode, *.job files remain in the wait directory (#6398)
- The component does not support DrainMode (#5150)

ePost Connector (epost)

New Features

- Support for ePost letter as a new delivery method (#4078)

Fixed Bugs

- The ePost, Xrechnung, and WebApi components should not accept any further orders from external sources when Drain Mode is enabled (#5646)

XRechnung Connector (xrechnung)

New Features

- Sending of XRechnungs via the Federal Printing Office portal (99/Bund only) (#4171)

SMTP Receiving Component (smtprx)

Fixed Bugs

- Quoted Printable MIME Parser leaves extraneous spaces in the text (#5950)

SMS sending via UCP (ucptx)

Fixed Bugs

- After an in-place update from Upgrading from 8.0.0 to 8.1.0, UCPTX no longer works (#6240)

SMS reception via UCP (ucprx)

Fixed bugs

- Usage of iswihelpX.dll during installation while it is not yet installed on the system (#5580)

SMS sending/receiving via GSM modem (gsmSMS)

New features

- Flutter fax client (fax, SMS, voicemail) (#4597)

Fixed bugs

- After deleting the text in the test tool and entering new text, SMS messages can no longer be sent (#6122)

Transfer log database (logdb)

New features

- Establishing SQL connectivity with ODBC 18 drivers (#5884)

SNMP component (snmp)

Fixed Bugs

- OM Suite installation on Windows 11 fails (#6415)

Sending/receiving SMS via SMPP Provider SMS (smpp)

New Features

- Disable "Request delivery confirmation" by default (#5073)

Fixed Bugs

- SMS via SMPP is not sent if an emoji is present (#6514)
- Creates jobs with the undocumented parameters JobId, MsgType (#6045)
- Usage of iswihelpX.dll during installation while it is not yet installed on the system (#5580)

Authentication Gatekeeper (gatekeeper)

Fixed Bugs

- Added Cache Control Security Header (CSP) and Login Lock (#6590)
- Potential database handle leak in the Gatekeeper's Journal API (#6106)
- Improved text rendering in the converter (#6059)
- When creating a Certificate Signing Request (CSR), the current certificate should not be overwritten (#5660)

Command Converter (cmdconv)

New Features

- Offer a newer PDF/A version as output (#6522)
- Install ftxt2html.exe and fmd2html.exe (#6142)
- JetPCL has been removed and replaced with VeryPDF (#5811)
- Make configuration parameters across converter components centrally configurable. (#5683)

Fixed Bugs

- Tesseract does not generate PDF/A (#6521)
- Conversion error in cmdconv (#6414)
- OCR recognition with current version of Tesseract does not work correctly (#6388)
- MHT->PDF problem fixed (#6336)
- Crashes with target format PDF_STAMP (#6334)
- Problem with incorrectly received faxes using OCR and printgw (#6282)
- Crashes when a conversion with external programs times out (#6201)
- Converter routes are not found even though registered (#6133)
- Conversion from HTML->PDF with Chromium produces PDF in Letter format (#6131)
- GUI Cfg parameter for cmdconv: CSS file selection for TXT-HTML(PDF) (#6130)
- SMS display when using a GSM modem includes two blank lines at the end of each SMS, and the € symbol is not converted correctly (#6112)

OLE Converter (oleconv)

Fixed Bugs

- Images in Word documents are heavily darkened when converted via Word (oleconv) (#5510)

Print Gateway (printgw)

New Features

- Duplex, Copies, B/W, Orientation (#6107)

Fixed Bugs

- Print freezes (#6373)
- Configuration: Default printer is always displayed as "" (#6126)

Component Starter (starter)

New Features

- Job and document data encryption (#6271)

Fixed Bugs

- Crash with crash dump in Foam/cJSON (#6723)
- Resetting the OMClass license field for version 9? (#6417)

Splitter (splitter)

Fixed Bugs

- Creates child jobs with empty file entries (#5343)

Controller (controller)

Fixed Bugs

- Deadlock in CTRL (#6422)

Monitor Base Component (monitor) (monitor)

New Features

- Admin Alert for Drain Mode Alarm from Components (Monitor Base Component) (#5875)

Config Proxy (cfgproxy)

New Features

- Database installation in CfgProxy (#6508)

Fixed Bugs

- OnTimeZoneListRequest(): get timezone list failed (#6462)
- Usage of iswihelpX.dll during installation while it is not yet installed on the system (#5580)

Configuration Program (cfgprg)

Fixed Bugs

- Crash when opening the routing table (#6618)
- System settings/Error handling: Error texts and error codes can only be edited up to a maximum of 999 (#6405)
- Flutter GUI for central converter settings (#5987)
- Fields for WebAPI, EPost, and XRechnung added (#5397)
- Status icons of the SIP component behave differently in drain mode than with other components (#5245)

Notes Gateway (notesgw)

New features

- OCR text file can be configured in addition to the received document (#6168)

Fixed bugs

- Nextpwd.dll is not delivered in the correct version (#6528)
- Support for Notes Client 12 (#6246)
- OCR TXT in Notes Connector (#5428)

Installer (setup)

New features

- Applying the new fields in common.cfg during Messaging Server Update (#6596)
- SQL Server updated to Express 2022 in setup (#6475)
- Command-line tool Jobstat no longer exists (#6335)
- OfficeMaster Exchange Management Console added as a separate setup in the current version in the download section of the website (#6332)
- fpdfadd font licenses included in installation (#6153)

Fixed Bugs

- Update installer hangs with "file in use" message for the SQL database during configuration backup process (#5533)

OfficeMaster Speech AI

New Features

- Download URLs for models (#6573)

Fixed Bugs

- Logging check in SpeechAI (#6589)
- Web configuration: sporadic authentication error (#6569)

General

New Features

- Log-Rotate component log files based on maximum number of days instead of maximum number of generations (#6384)
- Fax test tool does not send xls and doc files (#6370)
- Enable global selection of greeting texts and enabling/disabling the option to leave messages (#6088)
- Set the OfficeMaster Messaging Server service to Automatic startup type instead of Automatic (Delayed) (#5063)
- Versioning and backup of the Msg Srv configuration files (#3880)

Bug Fixes

- Language switching (#6572)
- The checkmk plugin does not support checkmk versions 2.3 and 2.4; updated (#6549)
- FOAM server terminates without the component being able to respond (#6500)
- Send retries/error texts are incorrectly defined (#5985)
- Change the PORT_RANGE default in the installation from 49000-50000 to 49152-50000 (#5737)
- A timeout of the FoamReceiveTimeout() command is not reported as an error or status (#4775)
- Updated the openssl library to version 3.5.0 (#4573)
